# SPECIFICATION SHEET

## 1m, Two Piece Cone

### PRODUCT DESCRIPTION >

Our two-piece traffic cones are the most dominant road cone in use today nationwide, and the most practical cones on the market for construction, events and highway traffic management.

On impact the top of the cone separates from its durable self-weighted anti slip base and divides into two sections, this ensures the cone does not get jammed under vehicles & wheels causing a potential hazard and safety risk, this minimises the risk of skids and accidents.

The reflective circular patterned sleeve is highly visible to all motorists, pedestrians and contractual workers, directing traffic from or towards the preferred location. Although slightly taller and heavier than its once piece counterpart, they are designed for rapid easy deployment and fast recall with easy stacking for storage and transportation.

### 1 M , TWO PIECE CONE SPEC >

Width	Height	Depth	Weight
550mm	1000mm	550mm	7kg

### KEY FEATURES >

- 2 piece design
- Blow moulded top for easy handling
