Retractable Belt Barrier

SPECIFICATION SHEET

Retractable Belt Barrier

PRODUCT DESCRIPTION >

Retractable belt barriers are a brilliant solution for managing queues and the flow of visitors of pedestrians.

We stock three types of belt barriers which are distinguished by the variance in base. The barrier stanchions are all manufactured from a coated steel, stand at around 1m tall to act as visible and physical aid for guiding visitors/pedestrians.

All of the barriers feature a discreet locking mechanism which prevents them being easily removed. They also feature a brake system which ensures the slow retraction of the belt if unexpectedly released. These are easily assembled and can be neatly stowed away when not in use. There are four connectors on these which allows for multidirection queues.

BELT BARRIER SPEC >

Barrier name	Belt length	Belt width	Total length	Total height
Standard	3.4m	50mm*	3.7m	1020mm
Premium	3.4m	50mm	3.7m	1000mm
Stackable	2950mm	50mm	3m	920mm

The stackable belt barriers feature a u-shaped slot so that they can be stacked upright when not in use. Whilst all our barriers are built to a high standard the base for our premium model is manufactured from a cast iron.

All our barriers include padding on the underside of the base. Our standard barrier features a rubber ring around the circumference of the base for extra protection.

KEY FEATURES >

- 4-way belt connection for flexible use
- Discreet belt lock
- Slow retracting brake system
- Ease of installation
- Easy to handle, transport and store
- Matt, jet black professional finish
- Padding on underside of base for contact protection
- Can be linked to multiple barriers for extended length
- Total barrier weight is just 9kg
